We are pleased at BIRMINGHAM OPTICAL and NIDEK that our MP 3 microperimeter is so pivotal in clinical management and trials

The Low vision rehabilitation programme is gaining much interest globally in providing a formal training in rehabilitation

Learn more about the NIDEK MP 3 from us at BIRMINGHAM LPTICAL

Really, Nidek's MP3-S microperimeter never ceases to amaze me. It's shaping the things we do here in terms of natural history study and new research opportunities trying to identify new methods to characterise retina — and possibly new clinical trial outcomes. Being able to test under photopic, mesopic and scotopic broadens the horizons so much...

Below is an example of the results of photopic, mesopic and scotopic retinal sensitivities of 3 patients with a form of cone-rod dystrophy caused by variants in the KCNV2 gene.

So grateful to be able to use this beast 😊
